Eureka!

A Breakthrough in Playground Surfacing

Finally, surfacing that won't break apart or fade! **PebbleFlex®** is a revolutionary breakthrough in science, design and safety. Unlike traditional poured-in-place playground surfaces, PebbleFlex utilizes an advanced bond-in-place technology that bonds millions of pebbles together to create a surface with superior strength and beauty, plus UV light stability so it won't fade. Recycled foam under the bonded pebbles provides protective impact attenuation that doesn't degrade over time. Embed custom graphics—a logo, game or pattern—to create a truly personalized playground environment. Learn more at playlsi.com/pebbleflex.
