

IMPACT ON YOUR BUSINESS: Contractors using a Slope-Pro may now bid on contracts to mow highway interchanges, levy embankments, heavy brush in hilly fire prone areas, finished landfill sites and myriad of other uses.

Slope-Pro is a remote controlled, self contained, tracked mower capable of either rough-cut or finished-cut mowing. It is designed to mow difficult and sloped areas where conventional close-up methods cannot be used safely or economically.

They need only one operator and a Slope-Pro to cut $\frac{3}{4}$ acre per hour at 2mph and up to 1.20 acres per hour at 3mph (assuming a 20% overlap).

Not to be confused with other similar products on the market, Slope-Pro is a commercial-grade mower boasting a wide stance, hydraulically driven track drive, 29 HP EFI Kohler engine, on a sturdy frame, producing a 52" cut. Slope-Pro can be used where a finished cut is desired or a rough cut is necessary by simply changing the blades.

"We looked at all other similar products on the market and using our experience in producing commercial mowers, developed the Slope-Pro that in our opinion is "Best in Class," said Luke Janmaat, president of Progressive Turf. "Better yet, it is made in North America so technical support and parts availability are only a phone call away." Initial production is now underway. **Dealer inquiries are invited.**
