

IMPACT ON YOUR BUSINESS: The inherent stability of the Stokes aluminum tripod ladder, used for nearly 50 years by orchardists throughout the country, makes it the landscape professional's choice for tree trimming.

Stokes Ladders, Inc., manufactures ladders that are much safer in most landscape maintenance work than the standard 4-legged ladder. The inherent stability of the Stokes aluminum tripod ladder, used for nearly 50 years by orchardists throughout the country, makes it the landscape professional's choice for tree trimming. Its usefulness in steeper terrain and terraced gardens is enhanced by the addition of the optional telescoping third leg. Also, when equipped with the hard surface kit, it becomes safe to use on and around driveways, sidewalks, and other hard surfaces, while maintaining the stability of a tripod. And now, Stokes has introduced a fiberglass tripod ladder for use by landscapers who install Christmas lighting.

STOKES
LADDERS

Stokes Ladders, Inc., maintains a high standard of quality in its products. It manufactures all of its ladders in the USA, USA-made materials throughout.
