

## **IMPACT ON YOUR BUSINESS: Fat is the new slim in rainwater harvesting!**

Waterwall Designs specializes in slimline rain harvesting tanks for contemporary homes.

At just over two feet wide, the Waterwall Fatboy 650 gallon cistern combines a large storage capacity with a small footprint. The tank can be a feature, or due to the flat face can be easily hidden by a decorative panel.

Waterwall tanks are made to exacting standards - the UV stabilized high density polyethylene ensures light does not enter the tank, to stop algae from growing in your tank water. Solid, thick walls keep the tank strong and prevent bulging over the many years of service.

Our tanks come with an inlet strainer, overflow outlet, step-by-step instructions – and a 2-year manufacturers warranty.

See our website for comprehensive details including a how-to install video, photo gallery and supplier details.
