

LC DBM Product Profile - Xeripave Super Pervious (SP) Pavers

To request more information from this vendor, use the Reader Service card on page 69 and indicate information request # 544.

IMPACT ON YOUR BUSINESS: Xeripave® SP Pavers provide more opportunities for Landscape Contractors to meet today's green initiatives. With an outstanding flow-through rate, Xeripave® requires less surface coverage for a more cost effective solution.

Xeripave® SP Pavers offer traditional hardscaping and landscaping benefits. Xeripave® has exceptional pervious attributes to provide cutting edge solutions to stormwater runoff. Xeripave® SP Pavers have more than 35 percent void capacity, which allows a flow-through rate of more than one gallon per second per square foot. The pervious pavers are composed of beautiful natural aggregates, bonded together with a high-strength, clear polymer. With the option to use SP pavers in conjunction with permeable and other solid surfaces, Xeripave® offers project versatility with its unparalleled flow-through rate.
